SOMESH THOMBARE

someshthombre199@gmail.com | +91 8485830316 | LinkedIn | GitHub | Maharashtra, India

PROFESSIONAL SUMMARY

Python Full Stack Developer (Fresher) with 6+ months of professional internship experience building Django, Flask, and REST APIs web applications, RESTful APIs, JWT and OAuth2 authentication systems, and AI-powered platforms using Agile/Scrum methodology. Developed Smart Sheti, an award-recognized AI farming platform serving Maharashtra farmers, integrating TensorFlow/Keras (EfficientNet-B0), Generative AI (OpenRounter API) and LLM API integration, and real-time data processing with weather APIs. Published researcher (HISET-2025, IRJMETS) with hands-on experience in machine learning, model deployment, database optimization, CI/CD basics, and scalable backend architecture.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL

Backend Frameworks: Django, Django REST Framework (DRF), Flask, REST APIs, JWT & OAuth2 Authentication, Role-Based Access Control (RBAC), CRUD Operations

Frontend: HTML5, CSS3, Bootstrap 5, JavaScript (ES6), React.js, React Hooks, Redux (Basic), Axios

Databases: MySQL, PostgreSQL (Basic), SQLite

DevOps & Cloud: Docker (Basic), CI/CD (Basic), Git, GitHub, AWS/Cloud Fundamentals (Basic)

AI/ML & APIs: Generative AI, LLM API Integration, Gemini API,OpenRouter API, OpenWeatherMap API, Binance API, MT5 API

Methodologies: OOP, SDLC, Agile, Scrum, Sprint Planning, Code Reviews, Version Control

INTERNSHIP EXPERIENCE

Python Full Stack Developer Intern *Mar 2026 - Aug 2026*

Sanyu Infotech Pvt Ltd

- Gained hands-on proficiency in Python, SQL, React.js, and JavaScript, including Python memory management for backend optimization, through full-stack development following Agile/Scrum methodology.
- Handled large-scale database operations on datasets with millions of rows, optimizing SQL queries for performance, scalability, and database indexing.
- Built Frontend E-Commerce web application using React.js, React Hooks, and Axios for API integration and RESTful APIs with CRUD operations, within Agile sprint cycles.

Python Full Stack Developer Intern *Nov 2025 - Jan 2026*

Infosys Springboard

- Built full-stack web application using Python and Flask, integrating a Deep Learning Transformer model (Hugging Face Transformers) for image-based product price prediction, along with RESTful APIs, CRUD operations, secure JWT authentication, and database management.
- Completed full Software Development Life Cycle (SDLC): requirement analysis, development, testing, and deployment within Agile sprint cycles, delivering all assigned tasks on schedule.

PROJECTS

Smart Sheti - AI-Based Smart Farming Platform | Github

Published: HISET-2025 | IRJMETS | Stack: Python, Django, TensorFlow/Keras, EfficientNet-B0, Generative AI (OpenRouter API), REST API, OpenWeatherMap API, SQLite, Bootstrap 5

- Architected a scalable Django web platform covering 3 full crop lifecycle stages (planning, cultivation, harvest) for Maharashtra farmers, integrating 8 functional modules into a single unified system with RESTful API design.
- Deployed EfficientNet-B0 CNN (Transfer Learning) for real-time crop disease detection from leaf images, achieving 94%+ classification accuracy across 15+ crop disease categories with actionable remedy suggestions and model inference optimization.
- Built a hybrid Fertilizer Recommendation System combining ICAR standard rule-based logic and ML models using NPK values, soil parameters, and real-time weather data processing, improving recommendation accuracy by 40% over rule-only baseline.
- Developed a bilingual AI chatbot (English, Hindi & Marathi) using Generative AI (OpenRounter API) with LLM API integration, and delivered a government schemes portal reducing farmer information lookup time by 60%.

AI-Powered Multi-Modal Trading Agent | Github

Stack: Python, Django, TensorFlow, Scikit-learn, Binance API, MT5 API, Gemini 2.5 Lite API, SQLite, Chart.js, REST API

- Built an AI-driven trading platform analyzing Forex, Cryptocurrency, Gold, and Silver markets in real time, processing 1,000+ market signals per session via real-time data processing to surface profitable trading opportunities.
- Engineered a hybrid automated trading system supporting both manual AI-recommended execution and fully autonomous bot trading, reducing average trade decision time from 15 minutes to under 30 seconds.
- Implemented intelligent risk management: Stop Loss (SL), Take Profit (TP), user-defined daily loss limits, and automatic bot suspension after 3 consecutive losses, preventing uncontrolled capital drawdown.

EDUCATION

B.Tech - Computer Engineering | DBATU | CGPA: 8.37 *Sep 2023 - July 2026*

Diploma - Computer Engineering | MSBTE | 78.35% *June 2020 - May 2023*

CERTIFICATIONS & ACHIEVEMENTS

- Research Paper Published - "AI-Based Smart Farming Support Platform" - HISET-2025 (KVV University) and IRJMETS (2026)
- Hackathon Participant - Institute-Level Hackathons 2023, 2024, 2025 (3 consecutive years)
- Developed 2 end-to-end AI platforms (Smart Sheti and Multi-Modal Trading Agent) integrating Machine Learning, Real-Time APIs, Generative AI, and Intelligent Automation
